Webhook Example for Microsoft Teams

Webhooks allow users to send alert notifications to various applications using a customized webhook channel. This page provides an example for setting up webhooks for Teams.

This page refers to third-party instructions, which could be subject to change. Refer to the [Teams documentation](#) for the most up-to-date information.

Teams Setup:

1. In Teams, select the kebab, and search for Incoming Webhook.

2. Select **Add to a Team > Select a Team > Setup a Connector**.
3. Copy the Webhook URL. You will need to paste this into the Cloud Insights webhook configuration.

Create Cloud Insights Webhook:

1. In Cloud Insights, navigate to **Admin > Notifications** and select the **Webhooks** tab. Click **+Webhook** to create a new webhook.
2. Give the webhook a meaningful Name, such as "Teams Webhook".
3. In the *Template Type* drop-down, select **Teams**.
